

Summary

I am a dedicated Computer Engineering student, currently pursuing my BCA degree. With a strong foundation in computer science fundamentals, I am eager to apply my knowledge to real-world challenges. While I am still developing my professional experience, I am consistently seeking opportunities to expand my skillset. I am passionate about technology and committed to lifelong learning, aiming to contribute meaningfully to the field of computer science upon graduation.

Work Experience

Front-End Developer

 dASHMESH software solution
 Jan 2026 - Feb 2026
Next.js (React) , Vercel , MongoDB, Tailwind CSS , JavaScript (ES6)

Education

Becholar in computer application

 Shree Swminarayan College of Computer Science (SSCCS), Bhavnagar, Gujarat
 2023- 2026 • Graduation

Projects

AgreeCare

 [Project Link](#)
Developed an IoT-based smart agriculture system to monitor and automate plant growth conditions using sensors for soil moisture, temperature, and humidity. Collaborated with a senior to build an Android app integrated with Firebase for real-time data tracking, disease prediction, and weather insights. Implemented automated irrigation using NodeMCU and Arduino, improving water efficiency and crop management. The system also provides farmers with analytics, government scheme access, and agriculture-related updates.

MindHeal

 [Project Link](#)
A cross-platform Flutter application for mental health and mindfulness. the Aim of app is control Suicide rates which is rise globally. There is a critical need for a system that can detect early signs of emotional distress, provide instant support, and connect individuals with a counsellor-like companion before the situation escalates. Features: It provides multi-modal mood detection by analyzing user BPM & sentiment from both facial expressions (image)and vocal tone (audio). The app leverages AI/ML models (like ONNX and Google ML Kit) for this analysis. Based on the detected mood, a Generative AI-powered adviser & app also includes an interactive chatbot for on-demand support

masjid

 [Project Link](#)
Developed an interactive 3D simulation of the Al-Aqsa Mosque using C++ and OpenGL, enabling users to explore a realistic virtual environment. Implemented advanced graphics features such as lighting, texture mapping, and camera controls to enhance visual accuracy and user experience. Designed multiple viewing modes, including day/night simulation, with smooth navigation and real-time interaction. Focused on optimizing rendering performance and creating an immersive architectural visualization.

Achievements

published a research paper in international journal research matrix
in 2024 December international multidisplinary conference

Hold Second Rank in 2024 & 2025 Flash@SSCCS IT exhibition bhavnagar

with AgreeCare plant disease detection Flutter application in 2024
with MindHeal Flutter application in 2025

Skills

- Flutter
- Dart
- GetX
- Riverpod
- Provider
- Flutter Bloc
- Firebase
- ONNX Runtime
- Google ML Kit
- TensorFlow Lite
- REST API integration
- Android/iOS deployment
- React.js
- Next.js
- JavaScript (ES6+)
- TypeScript
- HTML5
- CSS3
- Tailwind CSS
- Responsive Design
- Vercel deployment Node.js
- Express.js
- MongoDB
- Mongoose
- REST APIs
- JWT Authentication
- Socket.io (real-time)
- Postman
- SQL Python
- Machine Learning
- Generative AI
- Prompt Engineering
- Data Analytics
- NumPy
- GitHub
- VS Code
- CI/CD concepts
- Database design Dart
- Python
- Java
- SQL Public speaking
- Client interaction
- Team collaboration
- Analytical problem solving
- Project coordination
- Multitasking

Certificates

AI Foundations Associate

 [Certificate Link](#)

Oracle Certified Generative AI Professional

 [Certificate Link](#)

Summer Analytics 2025

 [Certificate Link](#)

Salesforce Certified

 [Certificate Link](#)

Front-End Developer internship
